Data are current as of 8 am on 10/28/2020; **For populations <50,000**, <5 cases are reported as such or suppressed for confidentiality purposes. <sup>1</sup> **Gray:**<5 reported cases in the last 14 days; **Green:** Average daily case rate over the last 14 days: <4 cases per 100,000 population; **Yellow:** Average daily case rate over the last 14 days: 4-8 cases per 100,000 population; **Red:** Average daily case rate over the last 14 days: >8 cases per 100,000 population. <sup>2</sup>Number of new cases occurring over the current two-week period (10/11/2020 – 10/24/2020) compared to the previous two-week period (10/4/2020 – 10/17/2020). **Higher**=number of new cases in the current two-week period higher than the number of new cases during the last two-week period. **Lower**=number of new cases in the current two-week period lower than number of new cases during the last two-week period. **No change**=number of new cases in current two-week period is equal to the number of new cases during the last two-week period. <sup>3</sup>Change in percent positivity compared to the previous week's (10/22/2020) report. **No Change**= <0.10% difference in the percent positivity. Municipalities marked with an asterisk (\*) have either a long-term care facility, institution of higher education and or correction facility with 1) more than 10 confirmed cases in the last 14 days and 2) these cases make up more than 30% of the total cases for that municipality in the last 14 days. DPH calculates rates per 100,000 population using denominators estimated by the University of Massachusetts Donahue Institute using a modified Hamilton-Perry model (Strate S, et al. Small Area Population Estimates for 2011 through 2020, report, Oct 2016.) **Please note:** Data for these tables are based on information available in the DPH surveillance database at a single point in time. Case counts for specific cities and towns change throughout the day as data cleaning occurs (removal of duplicate reports within the system) and new demographic information (assigning cases to their city or town of residence) is obtained.

Municipalities marked with an asterisk (\*) have either a long-term care facility, institution of higher education and or correction facility with 1) more than 10 confirmed cases in the last 14 days and 2) these cases make up more than 30% of the total cases for that municipality in the last 14 days. DPH calculates rates per 100,000 population using denominators estimated by the University of Massachusetts Donahue Institute using a modified Hamilton-Perry model (Strate S, et al. Small Area Population Estimates for 2011 through 2020, report, Oct 2016.) **Please note:** Data for these tables are based on information available in the DPH surveillance database at a single point in time. Case counts for specific cities and towns change throughout the day as data cleaning occurs (removal of duplicate reports within the system) and new demographic information (assigning cases to their city or town of residence) is obtained.

Data are current as of 8am on 10/28/2020; **For populations <50,000, <5 cases are reported as such or suppressed for confidentiality purposes.** <sup>1</sup>Number of new cases occurring over the current two-week period (10/11/2020 – 10/24/2020) compared to the previous two-week period (10/4/2020 – 10/17/2020). **Higher**=number of new cases in the current two-week period higher than the number of new cases during the last two-week period. **Lower**=number of new cases in the current two-week period lower than number of new cases during the last two-week period. **No change**=number of new cases in current two-week period is equal to the number of new cases during the last two-week period. <sup>2</sup>Change in percent positivity compared to the previous week's (10/22/2020) report. **No Change**= <0.10% difference in the percent positivity. <sup>3</sup>Address information for these cases is currently being obtained. DPH calculates rates per 100,000 population using denominators estimated by the University of Massachusetts Donahue Institute using a modified Hamilton-Perry model (Strate S, et al. Small Area Population Estimates for 2011 through 2020, report, Oct 2016.) **Please note:** Data for these tables are based on information available in the DPH surveillance database at a single point in time. Case counts for specific cities and towns change throughout the day as data cleaning occurs (removal of duplicate reports within the system) and new demographic information (assigning cases to their city or town of residence) is obtained.

## Notes

- (1) Massachusetts is divided into five geographical EMS regions. For more information, please see <https://www.mass.gov/service-details/ems-regions-in-massachusetts>.
- (2) Cases per 100,000 for each EMS region are calculated as the number of new cases within a region divided by that region's population multiplied by 100,000.
- (3) Data source: MAVEN and Umass Donahue Institute Population Estimates.
- (4) Congregate care testing surveillance guidance requires facilities to take different action if their regional transmission is above or below 40 new cases per 100,000 residents.

# COVID-19 Cluster Explanation

## Clusters Within Long-Term Care Facilities

- A confirmed case is defined as a staff or resident with a new positive COVID-19 test result
- Confirmed cases are reported by each facility in aggregate, at least once a week, and are assigned to the week in which the data are submitted
- A “new” cluster is defined as two or more confirmed cases in a facility that has not reported a confirmed case in the prior 4 weeks
- A cluster is deemed closed when a facility has gone two incubation periods (28 days) without reporting a confirmed case among staff or residents

## Household Clusters

- A household “cluster” is defined as two or more confirmed Massachusetts cases, who reside at the same address with COVID-19 infection within 28 days of each other, and who are not known to be associated with another cluster
- The date assigned to each confirmed case’s event is that of the first positive lab date
- A cluster is deemed closed once two incubation periods (28 days) have passed from the last confirmed case

## All Other Clusters

- All other “clusters” are defined as two or more confirmed Massachusetts cases with a common exposure
- The date assigned to each confirmed case’s event is that of the first positive lab date
- The date assigned to each contact is that of the date they were linked to the cluster
- A cluster is deemed closed once two incubation periods (28 days) have passed from the last confirmed case

**New Clusters:** Clusters with the first case (indicated by the first positive lab result) identified during the four week period 9/27 to 10/24

**Ongoing Clusters:** Clusters with the first case identified prior to 9/27 that has not met criteria to be closed. Confirmed cases included in ongoing clusters occurred between 9/27 and 10/4 but are associated with a cluster that began prior to 9/27. Close contacts included in ongoing clusters occurred between 9/27 and 10/4 but are associated with a cluster that began prior to 9/27

**Closed Clusters:** A cluster is closed after 28 days have passed since the last confirmed case; 15,310 clusters are closed, 73,129 cases are associated with closed clusters

**Source of data:** Massachusetts Department of Public Health, Bureau of Infectious Disease and Laboratory Sciences. Long Term Care Facility Data from the National Healthcare Safety Network beginning 5/31/2020. All other data from MAVEN and are subject to change. \*Staff and residents; \*\*Cumulative COVID-19 deaths –includes residents only. \*\*\*Facility is closed. Data will continue to be included for completeness but will not change except for the result of data cleaning. PLEASE NOTE: This list includes nursing homes, rest homes, and skilled nursing facilities; reported COVID-19 cases to date represent both staff and residents. The number of cases for a facility relies on the amount of testing conducted; facilities not included on this list may have COVID-19 cases that have not yet been identified. As of May 25th 344 nursing homes reported that at least 90% of staff and 90% of residents had been tested. ALSO: Data on deaths is self-reported by each facility. In accordance with long-term care regulations, nursing homes and rest homes must report deaths due to any cause in any resident, either confirmed COVID-19 positive, or suspected to have COVID-19, even if the individual was never tested. When the number of deaths is between 1-4 residents, the number is suppressed and reported as 1-4, to protect possible resident identification. The Department of Public Health performs routine data quality reviews of the data it receives. This includes removing duplicate results and updating counts if needed. Also, occasional negative tests from nursing home residents result after being reported first as presumptive and are removed. As a result of this, the total of self-reported deaths may decrease to ensure accuracy.

\*Staff and residents; \*\*Cumulative COVID-19 deaths –includes residents only. \*\*\*Facility is closed. Data will continue to be included for completeness but will not change except for the result of data cleaning. PLEASE NOTE: This list includes nursing homes, rest homes, and skilled nursing facilities; reported COVID-19 cases to date represent both staff and residents. The number of cases for a facility relies on the amount of testing conducted; facilities not included on this list may have COVID-19 cases that have not yet been identified. As of May 25th 344 nursing homes reported that at least 90% of staff and 90% of residents had been tested. ALSO: Data on deaths is self-reported by each facility. In accordance with long-term care regulations, nursing homes and rest homes must report deaths due to any cause in any resident, either confirmed COVID-19 positive, or suspected to have COVID-19, even if the individual was never tested. When the number of deaths is between 1-4 residents, the number is suppressed and reported as 1-4, to protect possible resident identification. The Department of Public Health performs routine data quality reviews of the data it receives. This includes removing duplicate results and updating counts if needed. Also, occasional negative tests from nursing home residents result after being reported first as presumptive and are removed. As a result of this, the total of self-reported deaths may decrease to ensure accuracy. # Long-Term Care Staff Surveillance Testing

- On June 30, the Commonwealth issued an evidence-based surveillance testing policy for long-term care facilities to further support the safe care of vulnerable residents in these settings. This [testing policy](#) has been updated to align with federal policy and as more is learned about COVID-19
- Nursing facilities and rest homes are required to comply with the surveillance testing regimen, and may be subject to financial sanctions for non-compliance**
- Nursing facilities and rest homes were required to perform baseline testing of at least 90% of staff by July 19
- Facilities are required to adhere to a surveillance testing regimen based on the results of the baseline testing and adapt such regimen based on the presence of new cases and regional positivity rates; specifically:
  - If there are new COVID+ cases, the facility must test all staff weekly until there are no new cases for two weeks
  - If there are no new COVID+ cases, the facility must either test all staff, or 50% of staff, bi-weekly, depending on the 14-day positivity rates in the facility's county (included in this report)
- This report includes information on what staff surveillance testing regimen each facility is required to adhere to, and the percentage of staff tested during the latest complete testing period
- The state is supporting surveillance testing costs for nursing facilities and rest homes

## Massachusetts Department of Public Health COVID-19 Dashboard

# Infection Control Surveys

DPH serves as the State Survey Agency (SA) that submits COVID-19 nursing home data on behalf of Massachusetts to the Centers for Medicare & Medicaid Services (CMS). As outlined in the [June 1<sup>st</sup> CMS memorandum](#) CMS updated its COVID-19 reporting requirements to ensure 100% of Medicare- and Medicaid-certified nursing homes receive on-site review to mitigate the spread of COVID-19. Reporting requirements apply *only* to Medicare- and Medicaid-certified nursing homes, not *all* facilities in the state.

**Multiple Surveys Explained:** CMS requires states perform COVID-19 survey activities in addition to completing the required Focused Infection Control surveys of 100% of Medicare- and Medicaid-certified nursing homes by July 31, 2020. Additionally, CMS requires states perform on-site infection control surveys within three-to-five days of identification of any nursing home with three or more new COVID-19 suspected and confirmed cases since their last National Healthcare Safety Network (NHSN) COVID-19 report or any nursing home in which one confirmed resident case is present in a facility that was previously COVID-free. As facilities may require a number of on-site infection control surveys, we show here the results of the five most recent surveys.

### Deficiencies Explained:

- The **severity** level reflects the impact of the deficiency and is categorized by four levels of harm.
- The **scope** level of a deficiency reflects how many residents were affected by the deficiency.
- For each deficiency, the DPH survey team determines the level of harm (**severity**) to the resident or resident(s) involved and then determines the **scope** of the problem within the nursing home.
- The team assigns an alphabetical Severity and Scope value to the deficiency. In the report below, the alphabetical values are A through L. Values closer to A signify lower scope and severity. Values closer to L (i.e. G or higher) signify higher scope and severity.
- The key at the bottom of each page indicates the level of deficiencies reported, which corresponds to dots of different colors:  
**Green** = Deficiency-free survey; **Yellow** = D-level deficiency; **Pink** = E/F-level deficiency; **Red** = G or higher

---

**372 facilities received a combined total of 982 Infection Control Surveys between June 1 and October 9.  
Between September 25-October 9, 2020, 27 new surveys were mailed to facilities. Of those 27 new surveys:**

New Surveys With 2+ Deficiencies	1 Facility
New Surveys With 1 Deficiencies	10 Facilities
New Surveys With 0 Deficiencies	16 Facilities

## CMS Infection Control Surveys Conducted at Nursing Homes

The Centers for Medicare and Medicaid Services (CMS) requires infection control surveys to be conducted at all Medicare- and Medicaid-certified nursing homes as defined in the following link: <https://www.cms.gov/files/document/qso-20-31-all.pdf>. DPH conducts these surveys on behalf of CMS.

Some facilities that meet certain CMS requirements have been surveyed more than once. Follow-up infection control surveys must be conducted within three-to-five days when: (1) one confirmed COVID-19 case is reported in a nursing home that previously did not have any COVID-19 cases, and (2) three or more new suspected and confirmed cases are reported in nursing homes in one week that had previously reported a case.

Reflects surveys processed between June 1, 2020 and October 9, 2020		KEY: Green = Deficiency-free survey; Yellow = D-level deficiency; Pink = E/F-level deficiency; Red = G or higher

Data Source: Self-Reported Data from ALRs to Office of Elder Affairs; \* Includes staff and residents; Note: This list includes all Assisted Living Residences and their reported COVID-19 cases to date (staff and residents). The number of cases for a facility relies on the amount of testing conducted; facilities not included on this may have COVID-19 cases that have not yet been identified. Some facilities have tested some or all residents only; some have also tested staff. A low number of cases may reflect that not all residents and staff have not been tested, not necessarily low prevalence

Data Source: Self-Reported Data from ALRs to Office of Elder Affairs; \* Includes staff and residents; Note: This list includes all Assisted Living Residences and their reported COVID-19 cases to date (staff and residents). The number of cases for a facility relies on the amount of testing conducted; facilities not included on this may have COVID-19 cases that have not yet been identified. Some facilities have tested some or all residents only; some have also tested staff. A low number of cases may reflect that not all residents and staff have not been tested, not necessarily low prevalence
